Synthetic Hair Maintenance Guide

For Wigs | Hair Extensions | Toppers

1. To keep your wig looking its best, wash it 1 to 2 times a month or every 7 to 14 wears. It's just enough to keep it fresh and fabulous.
   However, this varies with each client. You'll know when it loses it shape & shine.

2. Fill a sink or bowl with COOL water—no hot water here! Add 1-2 capfuls of Strut Synthetic Shampoo. Swirl the wig gently, and gently massage shampoo on the cap. DO NOT RUB!

3. After shampooing, dispose of wash water and rinse under cool running water until the water runs clear—no suds left behind!

4. Towel press dry to remove any excess water, then place your wig on a plastic wig stand to air dry. This helps it hold its shape as it dries. Lightly spray leave on synthetic conditioning spray on hair.

5. Let the wig air dry naturally overnight on a plastic wig stand, shake and use a brush for synthetic fiber, brush upside down for more lift, and you're now ready to STRUT!

Remember: NO HEAT!

Product Guide

Strut Synthetic Shampoo | Strut Synthetic Conditioner

Strut Hair Spray for Synthetic Hair | Strut Wig Grip

Plastic Wig Stand / Styrofoam Head | Strut Mesh Travel Bag | Strut Style Comb

Styling Tips

- Synthetic Hair Spray provides great hold and washes out easily because it's water soluble. No build-up, just beautiful style!
- **Anti-static brushes** are specifically designed for synthetic fibers, such as the Strut Wet Brush, thin tail or styler comb.
- **No Heat!** Be cautious around stoves, campfires, or any heat sources to avoid damaging your synthetic hair and cause frizz. Shirts, collars, sweaters, friction will also cause hair to frizz.
- Always Remember to **STRUT** your hair!

Heat Defiant (HD) Maintenance Guide

For Wigs | Hair Extensions | Toppers

WASHING FREQUENCY:

We recommend washing your piece every 7 to 14 wears or about 1 to 2 times a month to maintain its fresh look and feel. Spray Dry Shampoo inside the cap between washes. ***However, this varies with each client.***

1. DETANGLE FIRST

Before washing, use only our Strut Wide Tooth Comb to gently remove any tangles. Starting from the bottom and working upward. **This fiber stretches with a brush**

2. SHAMPOOING

Fill bowl with cool water. Lather hair with a small amount of Synthetic Shampoo, making sure the hair is traveling in the same direction. Gently massage shampoo on cap. DO NOT RUB HAIR; This will cause tangling

3. RINSE THOROUGHLY

Rinse under cool running water until the water runs clear, ensuring no shampoo residue remains.

4. TOWEL DRY GENTLY

Wrap hair in a towel and gently pat to remove excess water.

5. DETANGLE AGAIN

Using the wide tooth comb, gently detangle hair again. Starting at the ends and working upward.

6. CONDITION & PROTECT

Apply Strut Leave-In Conditioning Spray (3-5 pumps), focusing on the hair strands and avoiding the base.

7. AIR DRY NATURALLY

Place hair on a plastic head stand and allow it to air dry. Do NOT blow dry, as the heat is too intense for HD fibers.

8. ENSURE CAP IS DRY

Before wearing or storing, ensure the cap is completely dry to prevent damage or discomfort.

9. FINISHING TOUCHES

Once dry, apply HD Smoothing Detangling Spray (3-5 pumps) to the bottom half of the wig or hairpiece, and gently comb through with the Strut Wide Tooth Comb.

70/30 Human Hair Blend Guide

For Wigs | Hair Extensions | Toppers

1. We recommend washing your blended piece every 7-14 wears or about once or twice a month to maintain its fresh look and feel. Spray Dry Shampoo inside the cap between washes. *However, this varies with each client.*
2. Before washing, gently remove any tangles using our wide tooth comb or Wet Brush ONLY
3. Wet Hair completely using cool running water
4. Gently lather the hair with a small amount of Synthetic Shampoo, making sure that the hair is traveling in the same direction. Gently massage shampoo on the cap. **DO NOT RUB HAIR; this will cause tangling**
5. Rinse thoroughly under cool running water until water runs clear.
6. Wrap hair in a towel and gently pat dry.
7. Gently detangle hair using a Wide Tooth Comb
8. Spray with Leave-In Conditioning Spray (3-5 Pumps) keeping away from the base.
9. Allow the hair to air dry naturally overnight on a plastic wig stand. Be sure the cap is completely dry before wearing or storing.

NOTE: You can not deposit color on this hair as it is a blend of synthetic and human hair.

Product Guide

Strut Synthetic & Dry Shampoos | Strut Synthetic Conditioner

Strut Heat Protectant | Strut Moroccan Oil (Use Daily)

Plastic Wig Stand / Styrofoam Head | Wide Tooth Comb / Wet Brush | Strut Wig Grip

Styling Tips

- All synthetic fibers can tangle and frizz with wear. It is IMPORTANT that the frizz is corrected early to avoid permanent damage to the fiber. Use a flat iron to smooth any frizz on medium heat 270°-280° F.
- Spray Heat Protectant on the section to protect the fiber (1-2 pumps per section) when using heat tools.

CURLING:

- Hold for 10-15 seconds, then turn the tip of iron toward the ground and release curl into palm of hand.
- Holding curl in one hand, gather up towards base and secure with a small clip (like pin curl)
- Allow curl to cool completely (about 5 minutes); remove clip and et curl hang naturally.
- We recommend using HD Smooth Detangling Spray with a Wide Tooth Comb DAILY to detangle your HD piece, especially with long wigs.

Human Hair Maintenance Guide

For Wigs | Hair Extensions | Toppers

1. To keep your hair looking it's best, wash it approximately 1-2 times a month. you wear it. It's just enough to maintain its beauty and softness. *However, this varies with each client.*
2. Before washing, gently remove any tangles using a wide tooth comb or Wet Brush. Fill a sink or bowl with COOL water, and add 1-2 capfuls of Strut Human Hair Shampoo. Swish your piece gently in the water while gently massaging shampoo on the cap. DO NOT RUB HAIR!
3. Rinse the piece under cool running water until water runs clear. Run your hnds through the hair without rubbing.
4. Apply Strut Conditioner from mid shaft to the ends of the hair. Let sit for 5-10 minutes to hydrate the hair, then rinser out with cool water. Be sure to hold the wig up so the water flows downward to smooth the cuticle. Do not apply conditioner to base as this could cause the hair to shed and fall out.
5. Use Strut Wet Brush to detangle hair while it is damp, starting at the ends and working your way up. TREAT IT WITH CARE!
6. Air dry on plastic stand to remove any excess water. For styling, use a canvas head and blow dry it. Set your part before drying for a polished look. Most human hair wigs need just a bit of heat styling to shape it after a wash.
7. Ensure the cap is completely dry before wearing/storing to prevent damage, discomfort or smell... lol xD

Heat Styling Tips:
Remember, you can use heat tools on your piece. Just be sure to use heat protectant, like Strut Heat Protector. Beware of the heat settings on your tools. Only use 300° or lower temperature.

Product Guide

Strut Wig Grip T Lace | Strut Luxury Human Hair Shampoo | Strut Luxury Human Hair Conditioner

Strut Luxury Moroccan Oil (Use Daily) | Strut Luxury Human Hair - Hair Spray | Canvas Block Head

Strut Wet Brush | Round Brush | Velcro Rollers

Our products are made for hair not attached to the scalp

Styling Tips

- **Hydrate and Nourish:** Wearable hair doesn't receive natural oils from your scalp, so it's essential to keep it hydrated and conditioned. Use our **Strut Moroccan Hair Oil** to nourish and maintain softness. (Helps to avoid split ends and frizziness)
- **Avoid Combing When Wet:** Never comb your wig while it's wet, as the knotting at the base could loosen. Instead, detangle with our **Strut Wet Brush** before washing. Let air dry then use blow dryer or flat iron on medium heat, 200° F or lower to style.
- **Set Your Style with Ease:** As part of your morning routine, lightly mist the hair with water before styling. Once styled, your look will hold until you reapply water.
